Public Health Department,
Town Hall,

Chesterfield.

September, 1948.

To the Chairman and Members of the Health Committee of the Borough of Chesterfield.

Mr. Chairman, Miss Robinson and Gentlemen,

I have the honour to submit my Nineteenth Annual Report on the Health and Sanitary Conditions of the Borough for the year 1947.

The Report has been drawn up in accordance with the requirements of the Ministry of Health.

I have again to sincerely thank you, Mr. Chairman, and the Members of the Health Committee, for your unfailing support in all measures taken for the health of the community, and I am also greatly indebted to my colleagues in other Departments for their continued co-operation and assistance.

In September, 1947, Mr. Carter, Chief Sanitary Inspector, retired on superannuation after 34 years service—20 as Chief Sanitary Inspector—and I take this opportunity of recording my appreciation of his valuable contributions towards the improvement of the sanitary conditions of the Borough, and also of the assistance he has often given to me personally.

In conclusion, I wish to express my sincere thanks to Mr. Drabble, Chief Sanitary Inspector, and Mr. Brown, Chief Clerk, for their valuable help in the compilation and writing of this Report, and also to place on record my appreciation of the loyal support given to me by the whole of my staff during the year.

I am,

Your obedient servant,

J. A. STIRLING,

Medical Officer of Health.

Report of the Medical Officer of Health for the Year 1947.

VITAL STATISTICS.

The population estimated by the Registrar-General to the middle of 1947 is 67,240, which is 940 more than the estimate for 1946. 1,386 births were registered in the Borough during the year, giving a birth rate of 20.61 per thousand population, as compared with 20.9 in the previous year, and with a rate for England and Wales for 1947 of 20.5.

There were 811 deaths registered during the year, giving a death rate of 12.06 per thousand population, as compared with 673 deaths and a rate of 10.1 in 1946. The rate for England and Wales in 1947 was 12.0.

In connection with the increased number of deaths, it is to be noted that the increases are mainly due to heart and respiratory diseases occurring in the age group 65 and over, which is only what can be expected in an ageing population.

Deaths of children under the age of one year were 85, giving an infant mortality rate of 63, as compared with rates of 31 and 50 for the two preceding years.

Full details of the causes of, and ages at death, and the ward distribution of deaths will be found in appendices 6 and 7.

PREVALENCE AND CONTROL OVER, INFECTIOUS AND OTHER DISEASES.

A periodical increase in the number of cases of measles and whooping cough is almost entirely responsible for the large number of notifications of infectious disease during the year. The total number of notifications was 1,605, of which 1,085 were on account of measles and 259 whooping cough, as compared with a total of 489, which included 83 measles and 108 whooping cough in the year 1946. There were 2 deaths from measles and 4 from whooping cough—all in infants under the age of 2 years.

Notifications of Scarlet Fever numbered 172, compared with 157 in the previous year.

The incidence of Diphtheria continued to decrease, only 3 cases being notified, with 1 death.

During 1947 the country in general experienced the worst epidemic of Acute Anterio Poliomyelitis ever known in this country, but the Borough was fortunate in that only 5 cases occurred, one of which was fatal, two were severe and two were mild. Prompt measures of isolation and treatment were adopted in all the cases and it was not found necessary to curtail ordinary everyday activities or to close any of the schools,

Diphtheria Immunisation.

During the year 1,089 children were immunised and, in addition, 331 children who had been immunised in infancy received reinforcement injections. At the end of the year 47.1% of the children under 5 years of age, and 75.6% of the children of school age had been immunised. Up to the end of 1947, 14,332 children had been protected since the scheme commenced in 1937.

The Birthday Card scheme, as outlined in previous reports, continued most successfully during the year, as did also propaganda in the form of advertisement and posters, and by the Health Visitors through constant following up.

Infestation.

Regular uncleanliness surveys were carried out in the schools and in the homes of children under school age, as hitherto. Of the 33,422 examinations of school children during the year, 523 individual children were found unclean, while the number of children under school age found to be unsatisfactory was very small indeed.

Treatment for scabies and verminous conditions continued to be carried out at the Skin Treatment Centre, and it is pleasing to report that the incidence of Scabies, Impetigo and allied conditions was the lowest since before the war.

MATERNITY AND CHILD WELFARE.

Appendices 18-22.

Maternal Mortality. There were two deaths from maternal causes during 1947, giving a maternal death rate of 1.4 per thousand total births, as compared with a rate of 2.8 in the previous year.

Infant Mortality. Increased deaths from congenital conditions and the respiratory diseases is largely responsible for the rise in the infant mortality rate, which in 1947 was 63 per thousand live births.

As will be seen by Appendix 8, fifty-six, or nearly 65% of the infant deaths are neo-natal, that is, deaths occurring within the first twenty-eight days following birth, and of these, 19 were due to prematurity and 30 to congenital conditions.

Infant Welfare Centres. 2,393 infants and children made 30,647 attendances at the Infant Welfare Centres during the year, as compared with figures of 2,354 and 29,547 during 1946. Of the total children attending, 1,120 were new attenders under the age of one year—nearly 80% of the total births in the Borough.

Towards the end of the year the Maternity and Child Welfare Committee approved a scheme for the establishment of three centres in different areas of the town to relieve the overcrowding at the sessions held at the Town Hall Clinic. As I have repeatedly pointed out in previous reports, very large attendances tend to defeat the main object of the centres—the giving of help and advice to the mother in the care of her child—and the setting up of these new centres will, I am sure, achieve this effect. It will also mean that the mothers will be able to take their babies to a centre nearer their own homes.

The centres continued to be used by the Ministry of Food for the distribution of milk, orange juice, A and D. tablets, etc., under the Government scheme for Expectant and Nursing Mothers, and children under five years. The percentage of uptake of orange juice varies according to the season and whether fresh oranges are available, but over the whole year the uptake in Chesterfield compares favourably with the Divisional Food Area as a whole. This is also the case in respect of the uptake of A and D tablets. The uptake of cod liver oil is only very small indeed, and it is felt that the main reason for its unpopularity is its unpalatability.

Ante and Post Natal Clinics. During the year 1,142 expectant mothers made 4,174 attendances at the Ante Natal Clinics. The number attending represented 80% of the total registered births in the Borough. The system whereby the Municipal Midwives attend at the ante-natal clinics with their own booked cases has continued with great success and to the advantage of both the expectant mothers and the midwives.

150 mothers made 245 attendances at the post-natal clinics.

Health Visitors. Appendix 21 shows a summary of the general work done by the Health Visitors. In addition to visiting infants and children, etc., the Health Visitors have done much useful work in encouraging diphtheria immunisation have taken their part in the various schemes in operation for the care of illegitimate children, care of premature infants, and made enquiries on behalf of adoption societies and other bodies.

Midwifery Service and Supervision of Midwives. 47 Midwives notified their intention to practice in the Borough during 1947; this number included 10 Municipal Midwives, 25 in Local Authority Institutions, and 10 in Private Maternity Homes. All the midwives coming under the control of the local supervising authority have been regularly inspected by the Supervisor of Midwives and found to be carrying out their work satisfactorily.

The Municipal Midwives attended 713 cases during the year, 571 as Midwives and 142 as Maternity Nurses, as compared with a total of 616 cases—494 as Midwives and 122 as Maternity Nurses—in the previous year.

Independent Midwives practising in privately-owned Maternity Homes, attended 744 cases, 242 as Midwives and 502 as Maternity Nurses. No domiciliary cases were attended by independent midwives during the year.

Corporation Maternity Home. As will be seen by Appendix 18, only 324 cases were admitted to the Maternity Home during the year under review, as compared with 650 in the previous year. This comparatively small number of admissions is due to the fact that for long periods there was an acute shortage of both nursing and domestic staff, with the result that for most of the year only 12 to 15 beds of the total of 36 were able to be used. Although this unavoidable shortage of accommodation has greatly inconvenienced many of those who would normally have entered the Home for confinement, no emergency cases on medical grounds, or those expectant mothers whose home conditions were unsatisfactory, were refused admission.

The Home continued to be a Part II Training School for Pupil Midwives in co-operation with the Municipal Midwifery Service.

Child Life Protection. At the end of 1947 there were five persons receiving children for reward, and the number of children on the register was six. The homes and children have been regularly inspected by the Health Visitors.

Nursing Homes. During the year one Nursing Home ceased to be used as such and the registration cancelled. One new Nursing Home was registered, and a Home previously registered as a combined Nursing and Maternity Home was reregistered as a Maternity Home only. At the end of the year the number of Homes registered under Section 187 of the Public Health Act, 1936, was four, one as a Nursing Home only and three as Maternity Homes only, giving accommodation for 33 beds, i.e., 27 Maternity and 6 others.

Routine visits to the Homes have been made by the Assistant Medical Officer of Health. In addition, the non-medical Supervisor of Midwives has inspected the Maternity Homes when making her routine visits to the Midwives owning them or employed in them.

Care of Premature Infants. The arrangement whereby space is provided on the notification of birth cards for the weight at birth when this is $5\frac{1}{2}$ -lbs. or less has continued

during the year. By this means immediate information is obtained regarding premature babies, which is passed to the Health Visitors, who give particular attention to these infants.

Special draught-proof cots with detachable linings, hot water bottles, special feeding bottles, etc., together with suitable clothing, are available when premature babies are kept at home, and the Municipal Midwives visit twice a day as long as it is considered necessary. A special premature infant nursery is provided at the Corporation Maternity Home and, when it is considered advisable, premature infants are conveyed there in special cots by the Borough Ambulance.

The following figures give information about premature babies in the year under review:—

(a)	Number of premature babies notified during 1947 whose mothers are normally resident in the Borough	102
(b)	Total number of premature babies notified during 1947 who were born: (i) at home (ii) in hospital or nursing home	35 145
(c)	Number of those born at home: (i) who were nursed entirely at home (ii) who died during the first twenty-four hours (iii) who survived at the end of one month	24 4 22
(d)	Number of those born in hospital or nursing home: (i) who died during the first twenty-four hours (ii) who survived at the end of one month	12 119

Care of Illegitimate Children. It is gratifying to again report a decrease in the number of illegitimate births, which in 1947 was 73, representing a rate of 51 per 1,000 total births. In the previous year there were 85 births giving a rate of 59, while in 1945, 95 illegitimate births were registered, representing a rate of 77.

The scheme for the care of the mother and her illegitimate child, as outlined in previous Reports, has continued to operate most successfully during the year. Briefly, the arrangements are as follows. The Chief Health Visitor and the Supervisor of Midwives are the responsible officers for the care of illegitimate children, with the result that in most cases the future of both mother and child is decided upon before the child is born. The Health Visitors pay special attention to these children, and the Supervisor of Midwives, the Chief Health Visitor and the Health Visitors work in close co-operation with the local Moral Welfare Association, the Borough Welfare Committee, the N.S.P.C.C. and other organisations.

It is pleasing to report that in a large majority of cases the mother is able to keep the child and live with the grandparents. Where a child is adopted, careful enquiries are always made to ensure it is being received into a good home.

Home Helps. The scheme of Home Helps for domiciliary confinements approved by the Maternity and Child Welfare Committee, of which an outline was given in my last Report, had its first full year's working in 1947. The demand for Home Helps has not been nearly as great as was anticipated, as will be seen by the fact that a Help was supplied in only 34 cases. At the end of the year there were five part-time Home Helps on the panel.

On the whole the scheme proved satisfactory, but it was found difficult on occasions, with the limited staff, to supply a home help where confinements of applicants took place about the same time. It was possible, however, to supply help to all those who applied for it.

SANITARY CIRCUMSTANCES OF THE AREA.

Water Supply. The water supply of the Borough comes from Linacre Reservoirs and various pumping stations, and, after purification and chlorination, is distributed from service reservoirs. In the Water Board's laboratory, chemical and bacteriological analyses are made at frequent intervals, in some cases daily, and bacteriological samples are examined at monthly intervals by the Public Analyst. The results of all analyses during the year under review have been satisfactory. The water supply is constant, the quantity adequate and the standard of purity satisfactory, and no plumbo-solvent action has been reported.

All the houses in the Borough have a piped supply, and no houses, therefore, receive their supply of water for domestic purposes from stand-pipes.

In September, 1947, the Chesterfield & Bolsover Water Board took over an area for supply, comprising parts of the parishes of Calow and Sutton-cum-Duckmanton.

Sanitary Inspection of the Area. Full details of this work will be found in Appendices 24 to 26.

Rats and Mice Destruction Act, 1919, and Rat and Mouse Destruction Infestation Order, 1943.

The total number of premises where action was taken in connection with rodent control was 112. Of these, 34 were business premises and 78 private houses. This work necessitated 425 visits being made by the Rodent Operator, at which 727 pre-baits and 447 poison baits were laid. As a result of this work, 321 dead rats were picked up above ground, a figure which represents only a proportion of the total rats destroyed. Many premises are cleared of rats without a body being found.

Two operations against rats in sewers have been carried out during the year, during the course of which 184 manholes were baited. The diminishing amount of bait taken gives some indication of the effectiveness of the previous sewer treatments.

THE FACTORIES ACT, 1937.

There are 62 factories to which Section 34 refers, and all these factories have received a detailed inspection for the issue of the appropriate certificate. There are on the register 217 factories where mechanical power is used and 79 factories where mechanical power is not used.

INSPECTION AND SUPERVISION OF FOODS.

Milk Supply. Milk Register.

Number of Registered Milk Producers in the Borough Number of Cowsheds in the Borough									
Approximate Number of Cows housed in the Borough									
Number of Registered Producers residing outside the									
Borough	48								
Number of Registered Retailers residing outside the									
Borough	4								
Number of Retailers (not Producers) residing in the									
Borough	18								
Number of Inspections of Dairies, Cowsheds & Milkshops	216								
Milk (Special Designations) Order, 1936.									

There are three producers of Tuberculin Tested Milk and thirteen producers of Accredited Milk resident in the Borough who are licensed by the County Council as the Licensing Authority. Supplementary licenses are issued to ten retailers in the Borough, by the Corporation, in respect of Tuberculin Tested, Pasteurised and Accredited Milks obtained from outside sources.

Meat and Other Foods.

The Ministry of Food continue to use the Corporation Abattoir as a Central Slaughtering establishment for both the Borough and the surrounding Urban and Rural Districts, the population of the area served totalling approximately 237,000. All the slaughtering of animals for human consumption was carried out at the Abattoir with the exception of 170 pigs killed on farms and cottagers' premises for home consumption. The inspection of meat, carried out by the Corporation, occupied the whole time of two inspectors.

The total number of animals slaughtered was 36,819, and 36,731, or nearly 100% were inspected. Resulting from this inspection, $143\frac{1}{2}$ tons of meat and offal were condemned as

unfit for human consumption. In addition, over 24½ tons of various foods, comprising imported meat, bacon, canned foods, fish, fruit and vegetables were also inspected and surrendered by traders, making a total of all foods found to be unfit for human consumption of 168 tons, 4 cwts. 8 lbs. There has been a notable increase in the amount of canned foods condemned during the year, a total of 10 tons 14 cwts. This is largely accounted for by the fact that much of the canned food which was held in bulk store during the emergency has now been liberated for the home market, and that during storage a certain amount of deterioration took place, rendering the food unfit for consumption. A considerable amount of the condemned material was utilised for technical purposes or for animal feeding.

Appendix 29, Tables 1 and 2, indicate the number and types of animals slaughtered and the incidence of disease affecting them. The increase in Bovine Tuberculosis in cows to 59.1%, and in cattle, excluding cows, to 31.1%, is very disquieting. There has, however, been a marked reduction in the incidence of Tuberculosis in swine.

FOOD AND DRUGS ACT, 1938.

During the year 247 samples of various foods were submitted to the Public Analyst. These samples comprised 197 milks and 50 other foods. Of the total number of samples taken, 152 were obtained formally and 95 informally.

Appendix No. 30 shows the nature and number of the separate foods analysed.

Fourteen samples of milk were found to be below standard, a percentage of 7.1; eleven of these being deficient in milk fats to a varying extent, the deficiency in most cases being very slight.

All other foods sampled were genuine with the exception of one sample of sausage meat, which was slightly deficient in meat content.

Legal proceedings were not considered necessary in any case.

The average composition of all milks was found to be:—

Milk Fats 3.66 per cent.

Solids not Fat ... 8.77 per cent.

Milks tested for Tubercle Bacilli.

Thirty-three samples of mixed milk from that number of producer-retailers of non-designated milk, representing the milk from 401 cows have been sent to the County Bacteriologist.

One certificate relating to a herd of 30 cows showed a positive result. Further samples taken from this herd identified one particular cow as being infected, and the animal was slaughtered.

HOUSING.

The following shows by Ward incidence the houses erected by the Corporation and by Private Enterprise.

	St. Helens	West	S. Leonards	Holmcbrook	Hasland	Newbold	Trinity	Central	New Whitt.	Moor	Rother	Total
Built by the Corporation: (a) Permanent Houses		20	71	3	_	32		-			33	159
Built by Private Enterprise: Permanent Houses	5	48*	10	1	14	13	1	1	9	2†	2	106
GRAND TOTAL	5	68	81	4	14	45	1	1	9	2	35	265

^{*} Including 2 conversions. † Including 1 conversion.

While the provision of new houses is of the first importance, and all available labour and materials have to be directed towards their erection, the older property in the Borough, already suffering from the enforced neglect of the war years, is deteriorating still further, and the Health Department has found it increasingly difficult to get even urgent repairs carried out.

As will be seen from Appendix 33, which shows the position of the Slum Clearance programme at the end of the year, there are still 242 houses upon which action is not completed. In many cases it has been found necessary to carry out first-aid repairs on these houses to render them reasonably habitable until the tenants can be re-housed. Eighteen houses in the Clearance Areas have been demolished during the year on account of their ruinous and dangerous condition.

Seven families were re-housed by the Local Authority, while one tenant found own accommodation.

APPENDIX 1.

PUBLIC HEALTH STAFF.

Medical Officer of Health and Borough School Medical Officer-

J. A. Stirling, D.S.C., M.B., Ch.B., D.P.H.

Deputy Medical Officer of Health and Deputy Borough School Medical Officer—

J. R. Byars, M.B., Ch.B., D.P.H. (resigned 31/7/47).

J. S. Hamilton, M.B., Ch.B., D.P.H. (commenced 19/8/47).

Assistant Medical Officer of Health and Assistant Borough School Medical Officer—

Bell C. Kelly, M.B., Ch.B., D.P.H. (resigned 21/6/47). Joan B. M. Leith, M.B., Ch.B. (commenced 10/6/47).

Obstetric Surgeon to Maternity Home (part-time)— A. M. Duthie, D.S.O., M.C., M.D., F.R.C.S.

> Dental Officer-A. Royden Littlar, L.D.S.

Consultant Surgeons under Puerperal Pyrexia Regulations (part-time)—

J. Chisholm, M.B., Ch.B., F.R.C.S.

J. E. Stacey, M.D., F.R.C.S.

Veterinary Surgeon to the Corporation (part-time)— W. King Clarke, M.R.C.V.S.

Public Analyst (part-time)—Hugh Childs, B.Sc., F.R.I.C.

Chief Sanitary Inspector—

A. S. Carter, C.S.I., Certified Meat Inspector (retired 31/10/47).

G. W. Drabble, C.S.I., Certified Meat Inspector

(appointed 1/11/47).

Sanitary Inspectors—

W. Teasdale, C.S.I., Certified Meat Inspector.

C. A. Wood, C.S.I., Certified Meat Inspector.

W. Roberts, C.S.I., Certified Meat Inspector.

J. H. Sharpe, C.S.I. (commenced 1/8/47).

Senior Health Visitor-Miss F. Smith, S.R.N., S.C.M.

Health Visitors and School Nurses-

Miss E. E. Passey, S.R.N., S.C.M., Cert. San. Insp.

Health Visitor's Certificate.

Miss O. M. Parker, S.R.N., S.C.M.

Miss A. Parkinson, S.R.N., S.C.M., Health Visitor's Certificate.

HOUSING.

The following is a tabulated statement of work done in regard to Housing in 1947:—

1.—Inspection of dwellinghouses during the year. (1) (a) Total number of dwellinghouses inspected for housing defects (under Public Health or 70 Housing Acts) . . . (b) Number of inspections made for the 70 purpose ... (2) (a) Number of dwellinghouses (included under sub-head (1) above), which were inspected and recorded under the Housing Consolidated Regulations, 1925 and 1932 (b) Number of inspections made for the purpose (3) Number of dwellinghouses found to be in a

state so dangerous or injurious to health as to

be unfit for human habitation ...

referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	7 0
2.—Remedy of defects during the Year without service of formal notices.	
Number of defective dwellinghouses rendered fit in consequence of informal action by the Local Authority or its officers	70
3.—Action under Statutory Powers during the year.	
A.—Proceedings under Sections 9, 10 and 16 of the Housing Act, 1936.	
(1) Number of dwellinghouses in respect of which notices were served requiring repairs	_
(2) Number of dwellinghouses which were rendered fit after service of formal notices:—	
(a) By Owners	_
(b) By Local Authority in default of Owners	_
B.—Proceedings under Public Health Acts.	
(1) Number of dwellinghouses in respect of which notices were served requiring defects to be remedied	14
(2) Number of dwellinghouses in which defects were remedied after service of formal notices:—	
(a) By Owners	11
(b) By Local Authority in default of Owners	_
c.—Proceedings under Sections 11 and 13 of the Housing Act, 1936.	
(1) Number of dwellinghouses in respect of which Demolition Orders were made	_
(2) Number of dwellinghouses demolished in pursuance of Demolition Orders	18
D.—Proceedings under Section 12 of the Housing Act, 1936.	
(1) Number of separate tenements or underground rooms in respect of which Closing Orders were made	_
(2) Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit
